One of the most important steps in sustainability is to ensure energy efficiency. First of all, energy use should be measured and problems should be identified and possible savings areas should be identified. Low consumption equipment and systems should be preferred. Long-term improvement should be achieved by using automation management and monitoring resources. Energy savings through maintenance, surveillance and monitoring must be continuously analyzed.

We use our energy efficiently to protect our world from possible dangers and set targets to reduce our energy consumption.

We are aware of the negative effects of the depletion of our hotel's energy resources, global warming and the damage caused by fossil fuels to the environment. We preferred renewable energy sources and made efforts to reduce our carbon footprint in nature.

Environmental Elements Realized within the Scope of Sustainability:

- The facility has received all necessary legal documents since its opening.
- The facility meets its water needs from the well belonging to the Authority. Groundwater is not used.
- Packaging wastes are collected, stored at the recycling waste station and collected by the waste collection organization contracted with the Municipality.
- Construction and garden wastes are collected separately from other wastes and dumped in the areas indicated by the municipality.
- Negotiated We are Supplier From our companies Chemical Trainings by taking Chemical In order to ensure the standardization of consumption, the awareness of our employees who use chemicals has been raised.
- The control of the equipment used for fire extinguishing was provided by the supplier company at certain periods.

Environmental Elements Planned to Be Realized Within the Scope of Sustainability as Our Hotel:

- Researching appropriate studies that can be done on solar energy in order to benefit more from solar energy.
- To include it in the annual training plan in order to raise awareness of our personnel in order to reduce the energy and water consumption rate
- To purchase environmentally friendly and energy-efficient machinery, equipment and consumables and to ensure its continuity,
- To include renewable energy sources in its projects in new investments and repair activities to be made in our facility in our energy use,
- To prevent recyclable waste from mixing with household waste with waste reduction through effective waste management and trainings and to reach zero waste awareness.
