

Waste Management Policy

Talimat No. :	SYS. POL.01
Page No :	Page 1 / 1
Published :	01.07.2025
Revision No. :	00
Prepared by :	

Purpose: To reduce, recycle, reuse and dispose of wastes generated as a result of the hotel's activities without harming the environment. To protect the environment in the waste management process and to ensure that waste is managed sustainably. Minimizing the environmental impact of both organic and hazardous wastes.

Content:

- **Waste Reduction Strategies:** Operational processes are optimized to minimize waste generation at our hotel. In particular, it is ensured that single-use products are reduced, reusable materials are preferred and packaging waste is minimized. Organic waste is minimized in kitchen operations, and food waste is avoided with meal planning.
- **Recyclable Waste:** All recyclable materials are collected at separate collection points. Plastic, glass, paper and metal wastes are sent to licensed recycling companies for recycling. Hotel employees and guests are informed about waste separation and appropriate guidance is given.
- **Management of Organic Waste:** Organic waste is managed with environmentally friendly methods. Special compost areas have been created in our hotel for composting kitchen and landscaping waste. In this way, organic waste is recycled and turned into fertilizer and used in garden areas.
- **Hazardous Waste Disposal:** Hazardous waste (e.g., chemicals, cleaning materials, electronic waste) is disposed of safely and in accordance with the law. Special storage areas have been created for hazardous materials in our hotel and these wastes are collected and disposed of by licensed companies. Chemical wastes are prevented from damaging natural resources.
- **Guest Information:** Our guests are informed about the waste management policies we implement in our hotel.
